How to Copy Cell Formatting, Row Height, and Cell Width in Excel 2010

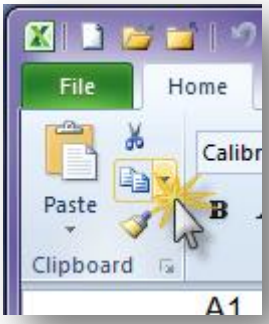

These instructions explain how to copy row height and cell width as well as cell styles when copying a range of cells from one worksheet to another work sheet.

To copy the range of cells do the following:

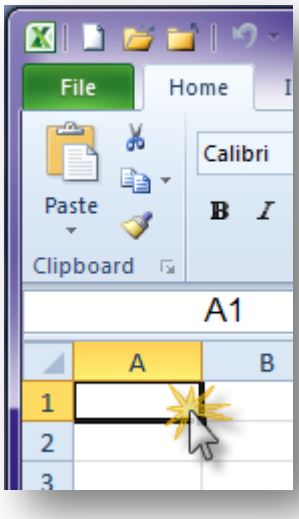

1. In the **original worksheet**, select the **range of cells** that are to be copied.

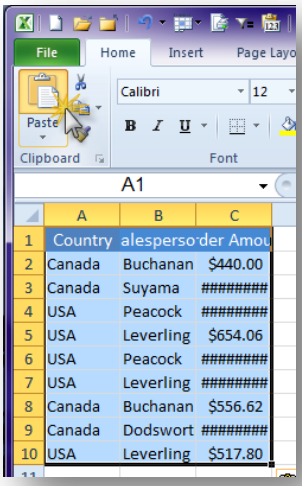

2. Click the **Copy** button in the ***Clipboard Group*** (Ctrl+C).

3. In the **receiving worksheet**, select the cell that will be the **top, left corner** of the pasted range of cells.

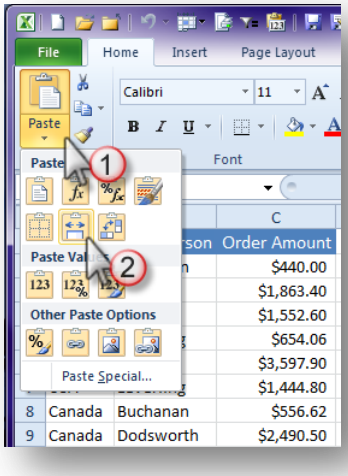

4. Click the **Paste** button in the ***Clipboard Group*** (Ctrl+V) to paste the range of cells into the receiving worksheet.

To copy the Column Width to the range of cells:

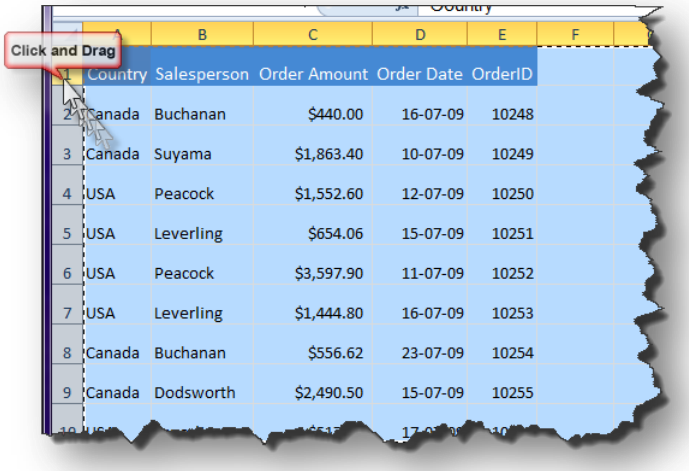

1. In the ***Clipboard Group***, click on the **Paste** button just below the **Clipboard** icon.

2. In the drop down, click the ***Keep Source Column Width*** button.

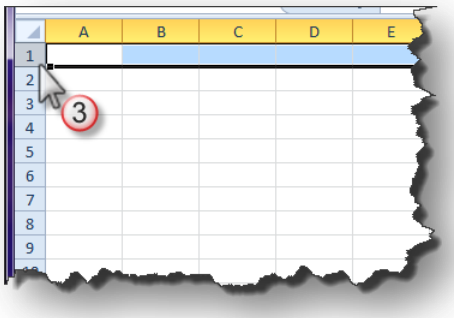

To copy the Row Height to the range of cells:

1. In the **original** worksheet, select the complete rows to be copied. (Select the row number to the left of your spread sheet, hold the left mouse button and move down the row numbers you wish to copy.).
2. Click Copy.

3. In the **receiving** worksheet, click on the row number of the first row you want to copy to (highlighting the complete row).

4. Now click ***Paste***. The row heights and contents are copied.
